

## PROJECTCLIMA GREATEST INNOVATION: ADAOCTO!!

Our new and unique **ADACTO** collection is a great innovation in the heating and interior design industries. Its exclusive patented system (radiator base and covers) allows it to offer unique and personalised solutions which make the product very flexible and eclectic.

**ADACTO** perfectly adapts to any environment through the personal choice of shapes and colours. A user-friendly software is available on our website to develop unique radiators for more challenging projects.

**ADACTO** is always **young**: unlike other radiators, it evolves and changes with your home by simply replacing its covers.

**ADACTO** is trendy: new colours and finishes are made available each season to keep your radiator in line with the latest trends of Italian design. **ADACTO** is **clean** because it allows easy access to the area behind the radiator which gives numerous benefits. The radiator is quick and easy to clean preventing annoying dust from depositing and darkening the wall. The wall behind the radiator can also be painted without having to remove it and the hydraulic system can be easily accessed for maintenance. **ADACTO** is just what your bathroom needs. It is **clever** because it has a thermal power which is up to 80% higher than a normal heated towel rail. It is **versatile** because any accessory suitable for your bathroom can be easily applied. **ADACTO** is **functional**: you don't have to choose exactly where you want to put it because its flexible-pipe technology allows it to easily fit any hydraulic connection. **ADACTO** materials are completely **recyclable** and **eco- friendly**. The manufacturing phases were also designed in respect of the environment. The **ADACTO** line is a new but revolutionary product range which allows customers to choose their own shapes and colours according to their requirements. **ADACTO** is the perfect solution for

offices lofts, shops and public locations allowing customers to choose the style and colour to suit any type of environment.
